

# Music\_Store\_Analysis\_SQL

## How to upload SQL project to GIT-HUB

### 1. Save your SQL project from pgAdmin

In pgAdmin, save your SQL queries as a .sql file.

For example:

```
SQL_Project/  
|  
├── music_store_analysis.sql  
├── README.md  
└── data/
```

If you have multiple SQL files, keep them in the same project folder.

### 2. Open Git Bash in your project folder

Go to your project folder in File Explorer.

Right-click → Open Git Bash Here

Then check:

```
pwd
```

and:

```
ls
```

You should see your .sql file.

### **3. Initialize Git**

`git init`

Then:

`git status`

You should see your SQL file as an untracked file.

### **4. Add the project**

`git add .`

Check:

`git status`

Your SQL file should now appear under Changes to be committed.

### **5. Commit the project**

`git commit -m "Add SQL project"`

### **6. Create a repository on GitHub**

On GitHub:

New repository → Repository name

For example:

SQL-Music-Store-Analysis

You can leave README unchecked if you already created one locally.

## 7. Connect your local project to GitHub

copy your GitHub repository URL and run:

```
git remote add origin YOUR_GITHUB_REPOSITORY_URL
```

For example:

```
git remote add origin https://github.com/yourusername/SQL-Music-Store-Analysis.git
```

Check it:

```
git remote -v
```

## 8. Push your SQL project

```
git branch -M main
```

Then:

```
git push -u origin main
```

**Your pgAdmin SQL project will now be available on GitHub.**
